Skin melanoma in Switzerland (ICD-10 C43)

New cases by age groups

- The incidence rate of skin melanoma has risen over the last 30 years among both women and men and across all age groups.
- The incidence rate has risen particularly sharply among those aged over 70. The increase was less pronounced among those aged 50–69 and 20–49.
- Men and older people are more likely to develop skin melanoma than women and younger people.
- Between 2018 and 2022, an average of 920 men and 615 women aged over 70 were diagnosed with skin melanoma each year in Switzerland, whilst the figures for the 20–49 age group were 255 men and 335 women.
